Actions Specific to Grids		Standard Forms		Viewing/Navigation options	
Accelerator Keys	Task Description	Accelerator Keys	Task Description	Accelerator Keys	Task Description
Ctrl+E	Export to Excel (only contents of grid)	Ctrl+N	Create a new record	Alt+F1	Show Navigation Pane (if it is not in auto-hide mode) - This shortcut works from both MDI & SDI windows, so it is a good shortcut to get back to the main workspace.
Ctrl+C	Copy: - If Single cell is selected, copies just that cell contents - If the entire row is selected or multiple rows are selected, copies values for ALL fields on all the rows (including those off the grid)	Ctrl+S	Save current record	Shift+Alt+F1	Enable/Disable auto-hide for the Navigation Pane
Up/Down Arrow	Move focus to the next/previous record, unselecting the current record	Alt+F9	Delete record(s)	Ctrl+Shift+D	Toggles the Content Pane between Developer and Content modes. Developer mode makes the content frame (where Area pages & List pages are viewed) restorable/minimizable so it is easier to work with developer windows.
Ctrl+Up/Down Arrow	Move focus to the previous/next record, leaving the current record marked and not marking the newly focused record	Ctrl+F4	Close the active window (saving changes)	Ctrl+F1	Open global search pane
Shift+Up/Down Arrow	Move focus to the previous/next record, leaving the current record marked and marking the newly focused record	Esc or Ctrl+Q	Close the active window (cancelling changes)	Alt+F5	Toggle the docking status of a docking window
Ctrl+Shift+Home/End	Mark all records between the currently selected record and the first/last record	Alt+F4	Close the active window from SDI form (saving changes), Close the application from the main window	Alt+F6	Move to the next docked window
Editable Grids		Ctrl+P	Print auto-report associated with current form	Alt+Shift+F6	Move to the previous docked window
Shift+Space	Mark the current record, leaving previously marked records marked.	Ctrl+A	Select all rows in the currently active data source (works regardless of whether you are in a grid or not)	Ctrl+F6	Move to the next MDI window
Read-only Grids (such as on a ListPage)		Alt+Down Arrow	Drops down a lookup field or drop-down-list	Ctrl+Shift+F6	Move to the previous MDI window
Enter	Execute default action (only on ListPage grids, usually opens the corresponding details form for selected record) - For Non-ListPage forms, Enter will move to the next field	Ctrl+Alt+F4 or Menu[i] + G	Go to Main Table Form	Ctrl+Shift+V	Open "Version control parameters" form
Left Arrow	Move focus one field to the left. If focus is already in the left-most column, hitting Left Arrow will "mark" the row.	F10	Activate the form's menu bar (File, Edit, etc.)	Ctrl+W	Open a new workspace
Right Arrow	Move focus one field to the right.	Enter or Tab	Move to the next field - Enter will skip over buttons and will move to fields across tabs. - Tab will navigate to buttons and will always stay on the same tab page.	F11	Focus the Address Bar in edit mode (works from anywhere)
Ctrl+Space	Mark the current record, leaving previously marked records marked.	Shift+Enter or Shift+Tab	Move to the previous field (same caveats as previous row)	Alt+Left Arrow	Shortcut for the Back button on the Address bar
Shift+Space	Mark all records between the current record and the top-most marked record (or the top record if none are marked), leaving previously marked records marked.	Ctrl+Shift+Home	Go to the first entry field in the form	Alt+Right Arrow	Shortcut for the Forward button on the Address bar
Shift+Page Up/Page Down	Mark all records between the currently selected record and the previous/next page of records.	Ctrl+Shift+End	Go to the last entry field in the form	From AreaPage, ListPage or developer (MDI) window	
Filtering Commands		Ctrl+Page Up	Go to the previous field group	Alt+M	Show the Microsoft Dynamics AX Command Bar
Accelerator Keys		Ctrl+Page Down	Go to the next field group	Alt+W	Show Windows menu Hint: do this then press "a" to close all windows.
Ctrl+F	Find by Field (clears previously applied filters)	Shift+F10	Open context menu for current field	Alt+V	Show View menu
Ctrl+K	Filter by Field (appends to previously applied filters)	Page Up	Move to the previous page of records	Alt+H	Show Help menu
Alt+F3	Filter by Selection	Page Down	Move to the next page of records	Alt	Show Keytips - Press the corresponding key to navigate directly to ActionPaneTab/Group/Button - There may be one or more ActionPaneTabs/Groups/Buttons with the same letter for a Keytip. To execute a duplicate Keytip, keep pressing the letter until focus is on the one you want and then hit Enter.
Ctrl+F3	Open Advanced Filter window	Ctrl+Home	Move to the first record		
Ctrl+Shift+F3	Clear all filters	Ctrl+End	Move to the last record		
Within a Grid		F5	Refresh all data sources on the current form		
Ctrl+G	Enable/Disable Filter by Grid	Ctrl+F5	Restore only the active record		
Ctrl+Up Arrow	From a grid cell, move focus to the Filter by Grid input cell for that column (Filter by Grid must be enabled)				
On a ListPage					
Shift+F3	Focus the Quick Filter ("Type to filter" area)				
Focus in Quick Filter					
Enter	Execute/Clear Quick Filter				
Down Arrow	Drop down the Quick Filter's Field Chooser menu				

Developer

AOT		Code Editor		Debugger	
Accelerator Keys	Task Description	Accelerator Keys	Task Description	Accelerator Keys	Task Description
Ctrl+D	Open the AOT	Ctrl+N	Create a new method/job	F5	Go
Ctrl+Shift+P	Open the Projects window	Ctrl+S	Save current method/job	Shift+F5	Stop
Ctrl+ O or Menu + O	- Job: Execute the job - Class: Run the main(Args) method - Form: Launch the form - Report: Run the report - Table: Launch Table Browser for this table	F5	- Job: Execute the job - Class: Run the main(Args) method - Form: Launch the form - Report: Run the report	F11	Step into function calls
Menu + W	Open new AOT window, with only the current node	Ctrl+F	Find and Replace (Find tab focused)	F10	Step over function calls
Ctrl+N	Create a new object	Ctrl+H	Find and Replace (Replace tab focused)	Ctrl+F11	Step out of the function
Enter or Ctrl+Shift+F2	Edit an object	F3	Repeat the last find	Ctrl+F10	Run to cursor
Ctrl+S	Save current object	Ctrl+G	Go to the specified line	Ctrl+Shift+F10	Set next statement
Ctrl+Shift+S	Save all modified objects	F4	Go to the next error/warning/task	Alt+Number Pad *	Show next statement
Delete	Delete current object	F9	Insert or remove a breakpoint	Shift+F9	View breakpoints
F2	Rename current object	Ctrl+F9	Enable or disable a breakpoint	F9	Insert or remove a breakpoint
Menu + R	Restore the state of the current object from disk, cancelling any pending changes	Shift+F9	View breakpoints	Ctrl+F9	Enable or disable a breakpoint
Ctrl+Shift+I	Import one or more application objects from a file	Ctrl+Shift+F9	Remove all breakpoints	Ctrl+Shift+F9	Remove all breakpoints
Menu + X	Export the current node to an XPO	Ctrl+Space	List properties and methods for the selected object	Ctrl+Alt+Line	Show/hide line numbers
F7	Compile	Ctrl+Alt+Space	Lookup a selected label or text	Ctrl+Alt+V	View variables
Ctrl+P	Print the active application object (basically XPO contents)	Ctrl+Shift+Space	Go to the definition of the selected method	Ctrl+Alt+C	Display the call stack
Alt+Enter	Open the property sheet	F2	List all tables	Ctrl+Alt+O	View output
Ctrl+F	Find window	Ctrl+T	List all Extended Data Types	Ctrl+Alt+B	View breakpoints
Ctrl+G	Compare different versions of the application object	F11	List all enums	Ctrl+Alt+W	View watch
Alt+Left Arrow	Move the object to the level of its current parent node in the tree	F12	List all classes	Ctrl+Alt+M	Toggle workbook mode
Alt+Right Arrow	Make the current object a child of the nearest container above it in the tree	Shift+F2	List language-reserved words	Ctrl+Alt+D	Restore default layout
Alt+Up Arrow	Move the object one slot up in its current level of the tree	Shift+F4	List built-in functions	Ctrl+F4	Close window
Alt+Down Arrow	Move the object one slot down its current level of the tree	Alt+R	Open the "Scripts" context menu	Ctrl+Shift+F4	Close all windows
Number Pad *	Expand all sub-trees under this node	F6	Close the current tab discarding all changes since last save	Ctrl+F6	Next window
Shift+F9	View breakpoints	F8	Close, and save the current tab	Ctrl+Shift+F6	Previous window
Ctrl+Shift+F9	Remove all breakpoints	Ctrl+L	Delete the current line	During code execution	
Source Control		Ctrl+Shift+L	Delete from cursor to the end of the line	Ctrl+Break	Break execution of currently running script. - To open the debugger where the execution is stopped, when the "Are you sure that you want to cancel this operation?" dialog comes up, hold SHIFT and click the No button.
Alt+I	Check the application object into the version control system	Selection Modes			
Alt+O	Check out the application object for editing	Alt+A	"Select Area" - Area Selection Mode – clicking and selecting an area in the editor occurs as in typical editors (default setting)		
Alt+U	Undo check out	Alt+O	"Select Columns" - Block Selection Mode – clicking and selecting an area will do so in a rectangle starting from the initial mouse cursor position (entire lines are not selected)		
		Alt+L	"Select Lines" - Line Selection Mode – clicking a line will select the entire row, clicking and selecting an area will always select the entire lines.		
		Alt+U	"Undo Selection" - Unselect the current selection.
